

The chart displays two time series from 2017 to 2021. The 'Actual Timeseries' (black line) shows a clear seasonal pattern with peaks occurring roughly every 12 months. The 'Predicted (validation)' (blue line) follows the actual data very closely, indicating a high level of model accuracy. The predicted line captures the seasonal fluctuations well, though there are some minor deviations, particularly in the early part of the series and around the 2019-2020 transition.
