

The chart displays two data series over a five-year period from 2026 to 2030. The x-axis represents time in years, with major ticks for 2026, 2027, 2028, 2029, and 2030. The y-axis represents price, with horizontal dashed grid lines indicating relative levels. The 'Actual prices' series is shown as a dark blue line, and the 'Predicted prices (validation)' series is shown as a red line. Both series exhibit a strong seasonal pattern with annual peaks and troughs. The predicted prices generally follow the trend of the actual prices, capturing the timing and relative magnitude of the peaks and troughs, though there are some deviations in the exact price levels.
