

The chart displays two time series from 2017 to 2021. The 'Actual Timeseries' (black line) and 'Predicted (validation)' (blue line) show a high degree of correlation. Both series exhibit a seasonal or cyclical pattern with major peaks and troughs. A notable event occurs in early 2020, where both series experience a sharp decline followed by a rapid recovery. The predicted values track the actual values well throughout the period, with minor deviations visible during the recovery phase in 2020.
