

The chart displays two data series over a six-year period from 2025 to 2030. The x-axis is labeled with years from 2026 to 2030. The y-axis represents price levels, indicated by horizontal dashed grid lines. The 'Actual prices' series (black line) shows a highly volatile pattern with multiple peaks and troughs. The 'Predicted prices (validation)' series (blue line) follows a similar trend but with significantly reduced volatility, particularly in the later years (2028-2030), where it remains relatively stable around a mid-level price point.
