

The chart displays two data series over a six-year period from 2025 to 2030. The 'Actual prices' series is represented by a black line, and the 'Predicted prices (validation)' series is represented by a blue line. The y-axis, representing price, ranges from 4700 to 5300 with major gridlines every 100 units. The x-axis shows the years 2026, 2027, 2028, 2029, and 2030. Both series exhibit significant seasonal or periodic fluctuations. The predicted prices closely track the actual prices throughout the period, capturing the major peaks and troughs, which indicates a high level of model accuracy for this validation set.
