

The chart displays two time series: 'Predicted (validation)' (blue line) and 'Actual Timeseries' (black line). The x-axis represents time from 2005 to 2009. The y-axis has horizontal grid lines but no numerical labels. The two lines are highly correlated, showing a similar pattern of peaks and troughs. The 'Actual Timeseries' generally follows the 'Predicted (validation)' line, with some minor deviations, particularly in the early 2005 period and around 2007.
